Completed End-User Products From Design to Delivery.

Barnes Manufacturing Services combines its many areas of expertise to design, engineer, and manufacture the exact product to fit your needs and specifications. Completed end-user products are delivered on time and to the quality you require.

Starting from scratch, we will design a product to fit your needs. Or we can work with your existing plans.

Components for each end-user product can be produced on site to assure quality, precision, and

inventory control. We utilize CNC flame cutting, lathes, mills, and wire EDM, as well as conventional machine tools. Prototype support and qualification of structurally efficient components are also available during development.

Designers, Engineers, and Manufacturers of Metal Fabricated Products
